TEMPERATURE EFFECT

The variation of indication caused by effects of temperature is to be calculated as per the below formula; which is to be added in the specified accuracy while measurement :-

Formula: ± 0.04 x (t_2 - t_1)% of Full Scale Value

Where t_1 = reference temperature (+20°C) & t_2 = ambient temperature in °C.

DAMPENED MOVEMENT [OPTION : GM]

It has been noticed that in applications where heavy vibration and pulsation is present, a dry gauge is not preferred due to the reduced life span and pointer fluttering.

The conventional option is a liquid filled gauge. But some of the filling option like Halocarbon oil is quite costly.

Solution! Use a dampened movement in the gauges. The movement utilize a DERLIN® tip Rack with jelly filled dashpot dampening for Rack & Pinion shafts which will reduce the effect of the pointer jerking due to the vibrations and pulsations. In effect avoid the use of a dampening liquid. This will nullify the leakage problem regularly associated with the filled gauges.

Additionally, comparing to the dry gauge the life span of the instrument will increase. The dampened movement also eliminate the environmental issues of the dampening liquid at the time of product disposal.

ITEC offer the DAMPENED MOVEMENT [GM] option in many premium models, such as P101, P102, P104, P201, P202 & P204.
